“QUEST and the Anti-QUEST: Good and Evil Attitude Estimation,” Y. Cheng and M. D. Shuster, *The Journal of the Astronautical Sciences*, Vol. 53, No. 3, July–September, 2005, pp. 337–351.

This work examines a rather clumsy algorithm that was proposed in 1978 by the Magsat Fine Attitude Task at CSC as a back-up to the first inflight application of the QUEST algorithm in the Magsat Mission (oh, ye of little faith). Powerful techniques are developed for accuracy evaluation of deterministic attitude-determination algorithms and applied to The Anti-QUEST. Although slow and clumsy, the Anti-QUEST turns out to perform rather well compared to QUEST.
